

To whom it may concern,

This is a formal reference to recommend Lathika Vivekanandan for future roles in DevOps Engineering or other related IT disciplines. I had the pleasure of working closely with Lathika at Computer Concepts Limited (CCL) in New Zealand for two years, where she consistently demonstrated exceptional skills and a strong work ethic.

In her role as a Senior DevOps Engineer at CCL, Lathika shows remarkable proficiency in Ansible automation, CI/CD pipelines, GitOps, API utilization and general Agile practices. Expertise with Ansible has been particularly noteworthy, where Lathika has designed and maintained complex playbooks for both Linux and Windows systems that have improved deployment timeframes and consistency. Lathika is also adept at using and managing an AWX/Ansible Tower environment.

In addition, Lathika also possesses strong capabilities using and consuming API endpoints. She has successfully integrated various services and automated infrastructure management tasks via CCL's custom middleware APIs.

Overall, Lathika is a highly skilled and dependable DevOps Engineer with a wealth of knowledge and practical experience. Her technical expertise, combined with a collaborative spirit and appetite for problem-solving, makes for a valuable asset to any team.

I am confident that Lathika will excel in any role she undertakes and will be a tremendous asset to your company or organization. Please feel free to contact me directly via the details below if you require any further information, or wish to discuss Lathika's qualifications in detail.

Sincerely,

Michael Balsillie
Associate Director, Infrastructure Automation
